Eligible to sign an internship agreement via IE University

Third-year Computer Science and Artificial Intelligence student at IE University with experience in Java, Python, and C through academic projects in machine learning and NLP. Worked with PyTorch, transformer models, and Random Forest for classification and prediction tasks. Seeking machine learning internship opportunities to apply and expand AI skills in practical applications.

EDUCATION

IE UNIVERSITY

Bachelor in Computer Science and Artificial Intelligence

Relevant Coursework:

Machine Learning | Data Structures | Algorithms | Cloud Computing | Devops

Segovia/Madrid, Spain

Expected: July 2027

SKILLS

Programming

Python, Java, C, SQL, Bash

Machine Learning & Data Science

PyTorch, HuggingFace Transformers, Scikit-learn, Pandas, NumPy

Cloud & Backend

AWS, Azure (Blob Storage, Function Apps), MySQL

Software Engineering & Tools

Git, Docker, REST APIs, Jupyter Notebooks, IntelliJ, VS Code, AWS, CI/CD Workflows

AWS Certificates

Getting Started with Serverless (Nov 2024), Getting Started with Compute (Oct 2024), Getting Started with Storage (Oct 2024)

Languages

Spanish (Native), English (Fluent)

Prototyping devices

Arduino, RaspberryPi

PROJECTS

Propaganda Technique Detection in News Articles

IE University, Madrid

Natural Language Processing Project

January 2026 - Present

- Built a multi-class NLP classifier (14 techniques) using transformer models (Python, PyTorch, RoBERTa), achieving 0.60 F1 (+8.1 pts vs TF-IDF baseline)
- Fine-tuned RoBERTa on 6.1K annotated spans, reaching macro F1 of 0.50 and micro F1 of 0.60
- Applied class-weighted loss to address imbalance, improving rare-class performance by up to +22 pts

FindMyPC

IE University, Madrid

Machine Learning Project

February 2025 - May 2025

- Built a Random Forest model to predict PC prices from hardware specs, achieving €366 RMSE on 4K+ products
- Built data pipelines using SQL and Python to clean and transform 4K+ product records (outlier handling, encoding, feature engineering) for model training
- Built and deployed a Streamlit app for real-time price prediction and product recommendations

Expense Management System

IE University, Madrid

Cloud Computing Project

October 2024 - December 2024

- Built a full-stack expense tracking app (React, Azure) supporting 6 users and 30+ transactions, with receipt uploads and real-time synchronization
- Designed a cloud backend using Azure Blob Storage, MySQL, and serverless Functions to handle 30+ expense records and 15+ file uploads reliably
- Implemented CRUD operations and responsive UI, reducing user interaction time by 30% for expense management workflows
- Deployed on Netlify with secure cloud integration for scalable data and file storage

EXTRACURRICULAR

IE Coding Club Events coordinator

October 2024 - June 2025

- Organized coding workshops, hackathons, and technical speaker sessions

Kode with Klossy Alumni (Summer Camp)

July 2023 - August 2023

- Built MapMyCulture, an iOS travel app using Swift UI that displays cultural information (food, sports, capitals) for 50 countries with interactive navigation and GitHub collaboration
